NEW! “HYPERFAST” SSD OPTIMIZER BRINGS SOLID STATE DRIVE LAPTOPS TO TOP PERFORMANCE LEVELS

(Las Vegas, NV) January 8th, 2009—Diskeeper Corporation at CES announced the unveiling of new HyperFast™ technology—the first-ever optimizer exclusively designed for faster performance and extended lifespan of Solid State Drives (SSDs).

With the promise of faster computing, SSD laptops or “netbooks” are all the rage right now—Lenovo, Acer, Dell, Asus and Fujitsu-Siemens are all launching custom editions. But in reality, there is one caveat: PC operating systems are not optimized for this platform. Most SSDs experience a dramatic and noticeable deterioration in performance by as much as 80% over six months. They also possess a limited number of erase-write cycles, resulting in a short lifespan.

HyperFast *specifically* solves these issues by intelligently eliminating performance-degrading free space fragmentation, and reducing the aggregate erase-write cycles that the SSD would otherwise incur during normal usage. In other words, it preemptively optimizes free space at the operating system level itself, thereby ensuring the peak performance of the drive—and extending its very lifespan.

No scheduling or maintenance is required whatsoever to experience these benefits. With Diskeeper Corporation’s proprietary InvisiTasking® processing technology, all HyperFast operations take place *completely automatically* with zero overhead and zero resource conflict. It’s literally as simple as set it and forget it and your SSD-based laptop or netbook has instant performance. Period.

To demonstrate this fact, benchmark tests were performed (Figure 1) on an 8GB SSD in a simulated real world scenario to depict a customer's environment over 6 months. **With HyperFast SSD optimization enabled, performance gains were automatically realized with 5.9x faster reads, 19.5x faster writes, 3.9X faster random reads and 9.0X faster random writes** (higher numbers indicate higher performance).

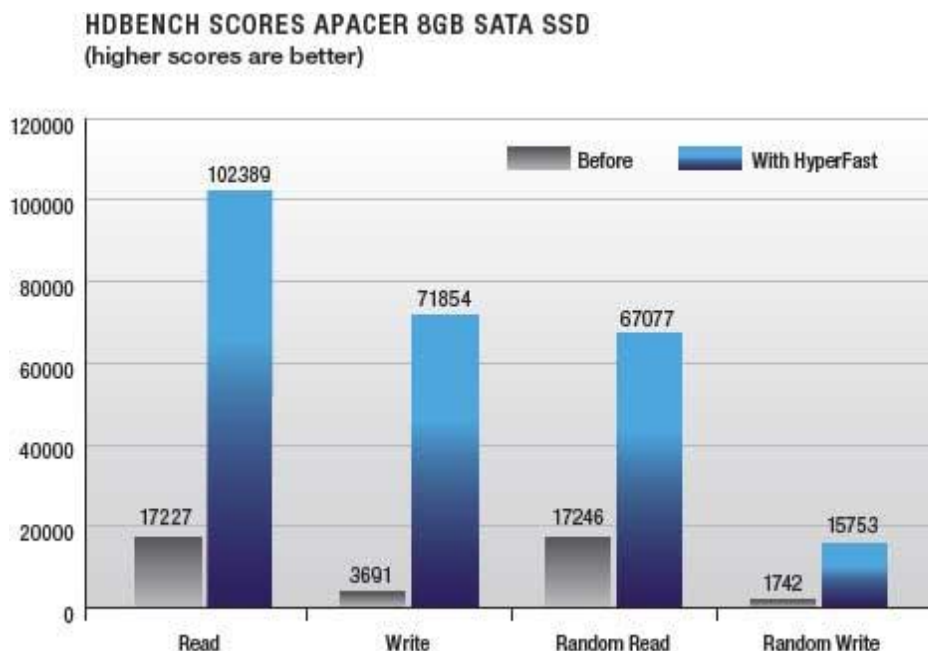

Figure 1: Performance Benefits from HyperFast

Key Benefits:

- **Faster Performance**
- **Longer Lifespan**

To achieve maximum performance and lifespan of your SSD laptop, netbook or desktop PC, install HyperFast optimization technology today. It is available with Diskeeper® 2009 for an additional \$25.00. Further information at: <http://www.diskeeper.com/hyperfast/index.aspx> or call 800-829-6468.

About Diskeeper Corporation—Innovators in Performance and Reliability Technologies®: Consumers, small home offices and the largest businesses rely on Diskeeper software to provide unparalleled performance and reliability to their laptops, PCs and servers. Diskeeper Corporation further provides real-time data protection and real-time data recovery™ with Undelete® data recovery software (www.undelete.com).
