

Testimonials

With the introduction of InvisiTasking in Diskeeper products, we knew we were onto something...

*“Absolutely, I do recommend Diskeeper to others. Diskeeper and InvisiTasking, as of V2007, is absolutely AWESOME!
Diskeeper 2008 with InvisiTasking and I-FAAST™ is even better.
My system performed much faster with early versions of Diskeeper.
My system performed even faster with less work with Diskeeper 2007 and InvisiTasking.
My system unbelievably performed even faster yet with Diskeeper 2008 using InvisiTasking!”*

**Bill Hahn, IBM Sr. Consulting Certified Software IT Specialist,
Dev. Tools and Server Middleware Evangelist**

*“Diskeeper 2008 Server edition fully defragments in a single pass. That’s very good, but not amazing. **InvisiTasking is the first truly “Set It and Forget It”® product that can run full time. The ability to defrag using only idle process time, with NO impact to system performance, is again, very good.***

“Add I-FAAST and access time to system files is cut in half! So you have a product that nearly doubles the performance, completely defrags, and does it all in the background; now THAT’S AMAZING!”

**David Irwin, MCSE, CNA, A+, NTCIP,
Sr. Infrastructure Engineer, Phoenix, AZ.**

*“I’m a professional IT consultant, and am very selective about my utilities. I couldn’t be happier with Diskeeper 2008 Premier. It is by far the best defragmentation software I have come across. **You can’t even tell when it’s running thanks to InvisiTasking.** My workstation has over 700 GB of files on its storage partition and not a single fragmented file.*

“I-FAAST has my operating system partition reading faster than new (over 275 MB/s average read speed).”

**Paul R. Dillinger, President,
CRSG Solutions Group, S.A.**

Testimonials

“I am very impressed with the InvisiTasking technology. It's so remarkably transparent that I had to hunt for it using Task Manager to make sure that it was actually running as a service on my Vista machine! I am a digital photography enthusiast and a highly advanced amateur photographer. I put great demands on my various computers and I am very pleased with my Diskeeper purchase, which is running on my newest and most mission-critical system.

“Yes, I would recommend this technology very highly to those who wish to keep their systems healthy and at optimum performance levels at all times.”

**Bill Tomcsanyi, IT Director,
Major Los Angeles County Hospital**

“I am running Diskeeper 2008 on my Windows Vista® computer. I love the InvisiTasking technology as it has virtually eliminated the need for me to run Diskeeper manually. I used to always pause or cancel auto-defrag in previous versions as it was too much drain on my system.

“As a photographer, I often am taxing my machine already. InvisiTasking keeps my system running at top speed with me never noticing Diskeeper working.”

**Chris Honour,
EastOrlandoPhotography.com**
